The clients request was for a **flat-TEE metal ceiling with an 8mm down-stand**. Whilst the client wanted a direct indirect they also wanted a fitting with air handling, visually interesting side rails and a bezel with a drop which matched the ceiling and also ultra shallow at 75mm.

All the above in addition to being energy efficient, LG3 and easy to install in its own void depth were achieved.

We sampled several variations so the client could decide which was their preferred.

1200 fittings installed.
