62 Charterhouse Street is a linear building with linear ceilings. Due to the overall dimension the length and width of the tiles were non-standard.

Due to the use of our T5 louvre with excellent space to height ratio and light output, we reduced the overall quantities of fittings by 20% from the clients initial estimates yet retained similar levels of illumination.

All fittings were DALi and supplied with Lo-tack/lamp installs fully wired. This saved time and cost on the install.
